Fringe Benefit Costs

Proposal budgets requesting project personnel salaries and wages must also request the fringe benefit costs associated with the salaries and wages. Fringe benefit rates are expressed as a percent of salaries. Therefore, to calculate fringe benefit costs, multiply the salary by the applicable benefit rate.

Example: The fringe benefit costs on $25,475 of salary for an individual with a fringe benefit rate of 34.7% is $8,840 (rounded to the nearest dollar).

It is UCI's practice to use composite or actual fringe benefit rates when estimating fringe benefit costs in extramural proposal budgets. It is also important to remember that the cost of fringe benefits will change over time due to benefit plan cost fluctuations and the employer contribution to the UC Retirement Plan (UCRP).

Composite Fringe Benefit Rates

The composite fringe benefit rates listed below are used for estimating fringe benefit costs in extramural proposal budgets. Please note that the below composite fringe benefit rates include the Employer Contribution to UCRP. Be sure to describe in the budget justification the composite rate(s) used. Sometimes it is necessary to provide a sponsor with detailed background information for the composite rates. In such cases, please contact the Contract and Grant Officer assigned to your unit to request this information.
