

# ZOT hSCRO System Release Notes

System: ZOT hSCRO | Release Date: 05/11/2026 | Prepared by: Electronic Research Administration

hSCRO (For Researchers)		
Bug Fixes		
1	PI Proxy still listed on protocol and retains proxy access after being removed from the protocol team.	Changes have been made to remove PI proxies who are no longer part of the Protocol Team Members from Submissions and Follow-On Submissions. A migration has been included that follows the same process. For security reasons, once PI proxies are removed, they will no longer be able to access their submissions or follow-on submissions using their credentials.
2	Changes to protocol team member roles do not appear on Follow-on Submission Contacts Tab.	<ul style="list-style-type: none"> <li>Previously, when an existing Protocol Team Member's roles were updated in a follow-on submission (Amendment / Amend CR), the follow-on Amendment's Contacts tab continued to show the old role values even though the SmartForm changes were saved. This has now been fixed — role updates for existing team members are now synchronized to the follow-on submission and display correctly on the Contacts tab across Draft, In Review, and Approved states.</li> <li>A migration has been included to update the roles of Study Team Members on the Contacts tab for all existing follow-on submissions (Amendments and Amendment/CRs).</li> </ul>

hSCRO (For Researchers & hSCRO Staff)		
Enhancements		
#	Summary	Description
1	Help Center documents are not deactivated using Safety Settings.	Previously, user guides were not removed from the Help Center when they were marked as inactive in Safety Settings. This issue has now been fixed — when a user guide is edited and marked as inactive, it no longer appears in the Safety Help Center Guides tab.
Bug Fixes		
1	Fixed Compare Mode, ensuring changes display correctly when converting a Continuing Review into an Amendment/CR	Previously, creating a Continuing Review and then converting it to an Amendment or Amendment/CR caused changes made to Amendment Details in Pre-Submission to not appear in Compare Mode. This has been fixed by incrementing the version when a continuing review is created, giving Compare Mode a starting point for comparing changes made in Pre-Submission to Amendment Details when the continuing review is converted to an Amendment or Amendment/CR.
2	Workflow Map not accessible to screen readers.	Improved accessibility for the workflow map image. Screen readers now announce a clear and concise description of the current state

		represented in the workflow map, ensuring users receive meaningful context about the displayed workflow status.
<b>3</b>	Safety User Guide — Staff Tasks is missing guidance on Verify (Admin) activity.	The topic "Approve a Submission Administratively" has been updated to include that submissions approved administratively appear under the meeting agenda after the study is approved.
<b>4</b>	Amend/CR changes to editable fields on Continuing Review introduction view extension incorrectly sets Submission Type to Continuing Review.	Previously, when editable fields were added to a view extension on the Continuing Review Introduction view, filling out and saving the SmartForm for an Amendment/CR submission incorrectly changed the submission type to Continuing Review. This has now been fixed — filling out and saving the SmartForm for an Amendment/CR submission no longer alters the submission type, and it correctly remains Amendment/CR.

## hSCRO (For hSCRO Staff)

### Bug Fixes

<b>1</b>	Fixed issue where amendments edited by Safety Specialists did not appear in the Specialist's dashboard inbox.	Previously, when a Safety Specialist edited Protocol Team Members or Basic Info steps in read-only states where the specialist has edit access, the amendment was not appearing in the Specialist's My Inbox on the Dashboard (though it was visible to the PI). This has been fixed — after editing Basic Info or Protocol Team Members steps in applicable read-only states, the amendment will now correctly appear in the Specialist's My Inbox.
